

Crushed Concrete

Applications and uses

- Backfilling trenches
- Packing under slabs
- Road pavement
- Building hardstands
- Driveways and footpaths

Our Crushed Concrete is sourced locally and provides customers with a sustainable alternative for a number of applications.

The concrete is sourced from demolished buildings, footings, channels and kerbs as well as surplus from premix concrete jobs. This concrete is a Class 3 registered D.O.T product (Department of Transport).

The concrete is crushed, screened and quality checked at our recycling plant in Eaglehawk and then passed on to domestic and commercial customers across Victoria.

Our Crushed Concrete is commonly used for backfilling trenches, packing under concrete slabs, road pavement, building hardstands, driveways and footpaths.

Why customers love this product

Cost effective

Hard wearing

Locally sourced
