

# Recycled Glass Sand

## Applications and uses

- Sand substitute
- Sand replacement in concrete mixes
- Sand replacement in asphalt mixes
- Bedding material for pipes and conduits
- Drainage layers in drainage systems

## Our recycled glass sand is sourced from local government recycling schemes.

Glass is received at our Eaglehawk Recycling Facility where we crush, screen, and grade the glass down to a 4.75mm sand product which meets the Department of Transport and Austroads specification. As a part of this process, we are also able to decontaminate the product from materials such as plastic, timber and metal.

Our glass sand is purchased by commercial customers who utilise the product for a multitude of applications such as a sand replacement for concrete and asphalt mixes, bedding for pipes and conduits, and as part of layered drainage systems.

## Why customers love this product
